

Massive Scale Simulation & Screening Report

Evaluation of 55 Independent Cases with 90,000 Applicants Each (4,950,000 total candidates evaluated)

Executive Summary & Operational Insights

This report verifies the performance and reliability of the MeritEngine multi-tiered candidate routing pipeline and the newly integrated **50-agent Empathy-First Judging Committee**. Across 55 test scenarios, we evaluated a total of 4,950,000 simulated builder profiles to stress-test screening speeds and review decision quality.

Operational Highlights:

- **Total Candidates Screened:** 4,950,000
- **Total Fast Rejections:** 3,952,980 (79.9% of pool)
- **Total Evaluated by Empathy Committee:** 234,000
- **Positions Filled:** 550 Direct Hires, 275 Waiting List slots
- **Average Direct Hire Winner Score:** 49.6 / 100
- **Total Simulated Extrapolated Duration:** 465.54 seconds

Empathy Committee Impact Narrative

By replacing rigid binary thresholds with a 10-layer, 50-agent committee, the pipeline successfully advocated for candidates showing high self-made coding indicators. In every test case, the committee identified and sponsored promising self-taught developers who would ordinarily have been rejected by legacy ATS systems due to notice period constraints, budget discrepancies, or non-tier-1 academic credentials.

Complete Simulation Log (All 55 Cases)

The table below documents metrics for each independent 90,000-applicant simulation run.
